### 1. What's in the box

Please ensure that all of the items below are included:

- P0 touch2box with Android™
  - Male-to-female HDMI cable
  - 5V AC power adapter
  - Quick start guide
- 

### 2. Input/output

- 1 RJ45 (Ethernet)
- 2 USB 3.1
- 3 5V DC in
- 4 USB 2.0
- 5 HDMI 2.0 (M)

---

### 3. Connecting your device

Please follow the steps below to connect your device to a (touchscreen) display.

1. Connect the HDMI plug of the device into the HDMI port found on your display. The supplied male-to-female HDMI cable can be connected to the HDMI plug if there is inadequate space for the device to plug in directly to the display.
2. Plug the power adapter DC jack into the 'DC in' port on the device. Insert the power plug into a mains (AC) power socket.
3. Switch the mains power on. The device will power on automatically once power is supplied. A blue LED located on the USB 3.1 port will light up to confirm that the device is on.
4. On the display, select the correct HDMI channel that the device is connected to, e.g. HDMI 1 or 2.
5. If you intend to connect the device to a touchscreen display, connect the USB touch cable provided with your touchscreen to any of the two USB ports on the device, and connect the other end to the USB touch port on your touchscreen.
6. If you intend to connect to the internet via Ethernet, connect an Ethernet cable (Cat 5e or higher for optimal data transfer speed) to the device and connect the other end to a network port.

---

### 4. Initial setup

Please follow the steps below to configure the device for your setup.

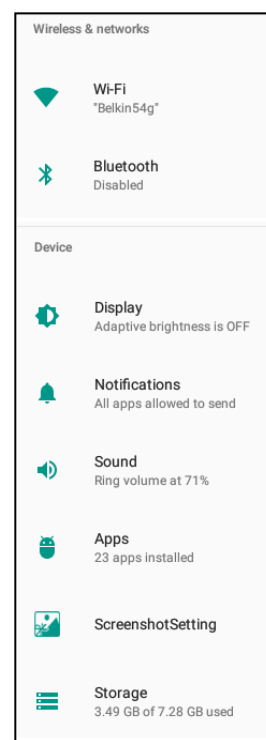

1. The device will turn on automatically when power is supplied to the device. Please note that the device may take longer to boot on the first instance.
2. Once the device has finished booting up, you will be greeted with the Android home screen as shown below.

- |          |              |           |                     |

## Initial setup (cont.)

3. If you connected an Ethernet cable to the device, you will automatically have access to your network.
4. To connect to your network via Wi-Fi, navigate to the Settings app found within the app drawer and select Wi-Fi. Select your networks' SSID and enter the security key. If the key is accepted, the Wi-Fi network will be displayed as Connected.
5. To install an app via the Google Play Store, simply run the Play Store app from the app drawer, enter your Google account details (or create a new account), search for the app you wish to install and select download. Once the download is complete, the app will be installed automatically and will appear in the app drawer.
6. Alternatively, if you have the .apk (android application package file) for an app you wish to install, simply copy this file to a USB drive and insert the USB drive into the device. Next, select the FileExplorer app from the app drawer, select USB and then select the .apk file on the device to begin the install. Once installed, the app will appear in the app drawer.

## 5. FAQ's

### **In system settings, why is only 5GB of the 8GB storage space available?**

This is due to android system files and space allocated for system recovery and cache.

### **Why is the date and time incorrect?**

The player must be connected to the network once to obtain date and time information, or manually set by the user in date & time settings. This will then be retained by the RTC (real-time clock).

### **Can the P0 player playback video at 1080p/4K display resolution?**

The P0 player is capable of 1080p (1920 x 1080) video playback @ 24 frames per second (based on a video encoded at 12Mbps bit rate using H.264 encoding). Some minor drops in frame rate may occur depending on the video bit rate. 4K video playback is not possible.

### **How can the display orientation be changed?**

The screen rotation button can be found within the Android navigation bar. If this is not visible, navigate to the Settings app > Display > View the screen rotation button in the navigation bar.

### **After using the shutdown button on the player, why can't I reboot the player without physically reconnecting the power adapter?**

The power adapter connector essentially becomes a power on button when in this state. For this reason, it is suggested the user powers the player down by powering off at the mains (AC) side.
